

PRODUCT GUIDE

GLOVES & PROTECTIVE CLOTHING

MAJESTIC
RELIABLE IN SAFETY

The President's Choice

At Majestic, our goal is to keep you safely on the job. Our selection of clothing, gloves and boots offer you the very best in protective wear. We partner with only high caliber distributors dedicated to excellent customer service.

Throughout this catalog you will find styles identified with our President's Choice symbol. The symbol denotes exceptional items as selected by company president Hugo J. Kruijger.

As a descendent of a glove-making family he is well schooled in both the old-world craftsmanship of work gloves and the latest advancements in protective wear.

After studying the entire collection from the perspective of end users like you, Mr. Kruijger selected items for their proven durability, excellent performance-to-cost ratio or because customers have told us time and again they are exceptionally useful on the job.

Look for the President's Choice in each category.

Quality Is No Accident...

and neither is customer satisfaction. At Majestic we are dedicated to maintaining our reputation for product quality, new product innovation and customer satisfaction. The goals of the Majestic quality management system are grounded in the concepts of continual improvement, exceeding customer expectations and striving to improve product availability and delivery. In fact, many of our manufacturing facilities are certified to current ISO Standards insuring consistent, reliable product quality. With these established goals, Majestic earned ISO 9001:2008 certification in August 2010. This prestigious certificate is awarded only to companies that have implemented and maintained a quality management system that meets the rigorous standards of the International Organization for Standardization (ISO).

We also recognize the importance of providing a complete product line to meet a wide variety of customer requirements. In addition, we are committed to developing new glove and clothing products to meet changing workplace conditions and demands. Majestic offers one of the most complete product lines available and new items are constantly added in response to customer needs and the changing marketplace. Our high visibility clothing line has grown immensely, as we have recognized the need for comfortable protective clothing. Our cut resistant line of gloves has also grown, and now incorporates some new exciting features.

Be sure to visit the "Personalization" section to learn how we can personalize gloves and clothing with a logo, name or other full color artwork...all done in-house.

We especially invite you to review this catalog to discover how Majestic could become a part of your hand protection or protective apparel program. If you would like additional information or a product sample, please contact your Majestic representative or our customer service department.

Thank you for helping us be more carbon conscientious.

Confused About Quality?

Unfortunately there are no industry standards for leather glove quality. Many glove manufacturers offer only two or three grades of leather and are very quick to label the best they have as “A Grade.”

This may compare equally with Majestic’s B or even BC grade, creating confusion and perhaps user dissatisfaction. Majestic offers five leather grades in grain leather alone. When you take into account various thicknesses, tanning, and types of leather available (such as deer, elk, gemsbok, goat, pig or camel), the decision of which glove to purchase becomes more difficult. Consider the variety of thumb styles, hems, sewing options, fit, comfort and job application...the options and possibilities are endless. To assist in your glove buying decisions, we strongly urge sample comparison and user field evaluations. We have invested in local market hand protection professionals, trained to provide the best solution for hand protection hazards. Call Majestic or your local glove specialist to see how we can help eliminate product quality confusion and get you the samples needed to make the best decision on your glove needs.

Types of Leather

Cowhide: Most commonly used because of availability and durability.

Pig: Economical price, dries soft (depending on tanning).

Goat: High wear resistance comparatively, flexible.

Deer: High flexibility and soft, dries soft. (This is the best.)

Elk: Soft and tough, dries soft.

Gemsbok: From the deer family, soft and economical price.

Camel: High wear resistance and soft. Wear all day long without being thirsty.

*see cuts of leather for sub-classifications.

Glove Material

Leather: Excellent protection for abrasion and cuts, breathability and comfort at an economical price.

Synthetic leather (Clarino, Amara, Armor Skin): A synthetic microfiber. Excellent dexterity and high abrasion resistance.

Nitrile: A synthetic rubber with a high abrasion, cut and chemical resistance.*

Neoprene: A synthetic rubber with a high chemical and heat resistance.*

PVC (Polyvinyl Chloride): Broad range of low hazard chemical resistance, economical price.*

Vinyl (Polyvinyl Chloride): See PVC.

Latex: A natural product that provides chemical resistance, economical price.*

Polyurethane (PU): A synthetic material, high abrasion resistance, chemical-resistant, very flexible.*

Kevlar® Aramid Fiber: A man-made fiber with high cut and heat resistance.

Dyneema® / Spectra®: Synthetic fiber with high cut and abrasion resistance. Chemically inert to sanitation bleaches and high PH laundering.

Wool: Natural fiber, excellent insulator.

Cotton: Natural fiber, economical price. Used for basic abrasion protection to insulation, depending on construction.

Polyester: A synthetic material mainly used in seamless gloves or as a blend to strengthen cotton knit materials.

Nylon: A synthetic, high tensile strength fiber, mainly used in lightweight coated, knit inspection and low lint applications gloves.

*Consult chemical manufacturers MSDS (Material Safety Data Sheet) for hand protection requirements.

The King of Sizes

As a leader in drivers gloves, we continuously strive to improve our line for both industrial and consumer drivers gloves. Our gloves are available in an extensive range of sizes—seven adult sizes in some styles, up to eight in others. We are also proud to offer new and innovative ideas in hand protection. Our goal is to continue to offer you safer, better, more comfortable and longer-wearing gloves.

What size do you need? Measure around the knuckles and palm, excluding the thumb. The measurement in inches is your numeric size. The chart below represents the industry accepted bias tape color for the size identification of drivers gloves.

■ XXS (size 6)	■ XS (size 7)	■ S (size 8)
■ M (size 9)	■ L (size 10)	■ XL (size 11)
■ XXL (size 12)	■ XXXL (size 13)	

Cuts of Leather

Grain: The outer, smooth surface of the hide, provides a superior wear resistance compared to split leather.

Split: The bottom surface of the hide, high tensile strength.

Split leather is sub-divided into:

Side: The best part of the split leather, the back, also called butt leather.

Shoulder: From the shoulder part of the split leather. More hairy than side, this is the second best quality of split leather. Often sub-divided into the type of selection, such as select shoulder, regular shoulder, etc.

Belly: From the sides of the hide, typically thinner and more fibrous. This is the most economical portion of the split leather.

Some Things You Should Know About Synthetics

Supported Coated Glove: A cloth glove that has been fully dipped or palm dipped into a liquid such as latex, PVC, nitrile, polyurethane, etc.

Impregnated: The plastic (PVC) does not merely coat the material, but actually penetrates the textile. Impregnated gloves are typically not liquid-resistant and are used when improved grip and dexterity or low level cut protection is required.

Unsupported Glove: A glove made by dipping a ceramic form into liquid latex or plastic. A glove is created when the material dries and is removed from the form.

Interlock Lining: The inner glove is made of lightweight cotton interlock knit fabric.

Jersey Lined: The glove is lined with brushed cotton fabric.

Flock Lined: An unsupported glove term that describes the inside of the glove as dusted with fine cotton fibers for moisture absorption and easy on-off.

Powdered: An unsupported glove term that describes the inside of the glove as dusted with corn starch for moisture absorption and easy on-off. Permeation: The measurement of breakthrough time it takes a specific chemical to be detected on the other side of the glove material according to ANSI/ISEA 105-2000 or EN374. Permeation is measured on a non-degraded glove. Rate is the amount of chemical passing through in a six-hour period.

Degradation: The degradation of the physical properties of a glove by exposing it to a specific chemical.

Glove Patterns and Styles

Ambi Pattern: Usually found in knit or lightweight cloth gloves only. The thumb and fingers are integral to the palm, allowing either glove to be worn on either hand. A major advantage to this style is that wearers can switch gloves after they have worn through on the original palm surfaces and in effect, start all over as if they had a new pair, effectively providing the user two pairs for the price of one. In the glove industry, this style is usually called reversible, but we feel Ambi is more appropriate and less misleading.

Clute Pattern: Recognized by the three parallel seams on the back of the glove. Seamless palm, with finger seams to the front of the hand.

Gunn Pattern: Recognized by the seam at the base of the two middle fingers. Seamless back, but finger seams are to the back of the fingers for comfort.

Anatomy of a Work Glove

Cuff Styles

Knit Wrist

Band Top

Safety Cuff

Slip On

Gauntlet Cuff

A “Thumbnail” Sketch of Glove Styles

Keystone Thumb:

By far the most freedom of movement and most comfortable, this style is preferred by most safety and health engineers because it is the most ergonomically correct work glove.

Wing Thumb:

Designed for open handed work (pushing, pulling, lifting, etc.). Work accomplished by the open palm does not expose the seams to wear. This style allows more freedom of movement and is in general more comfortable than the straight thumb.

Straight Thumb:

Designed for closed fist work (shoveling, prying, sweeping, etc.). When the fist is closed, the seams are out of the wear area (this is primarily a durability advantage).

What length of glove do I need?

The length of a glove is the measurement from the tip of the middle finger to the end of the cuff.

What's My Size?

Measure the circumference of your hand in inches between thumb and knuckle. Look up your size below:

Size	XXS	XS	S	M	L	XL	XXL	XXXL
Leather	6	7	8	9	10	11	12	13
Synthetic	5	6	7	8	9	10	11	12
Hand in Inches	5"-6"	6"-7"	7"-8"	8"-9"	9"-10"	10"-11"	11"-12"	12"-13"

We test our products before you do! Just another reason why we say, “Quality Is No Accident.”

New Glove Testing Capabilities

In just the last few years, the glove industry has become much more than just leather drivers, work gloves and a few styles of synthetics or thin mils. Today, glove companies must offer their customers a wider range of products in categories that did not exist a few years ago. Due to new materials, many of these categories, such as cut resistance and palm dipped knits, have become more technical and glove testing and rating systems for these new styles have become commonplace. In order to provide our customers with the best possible products, Majestic has invested in the devices used to test both cut and abrasion resistance, tensile strength, coefficient of friction and vertical flame. We do not operate a certified laboratory, but we are able to perform quality testing for the products we sell and thus ensure they are the best we can offer our customers. This testing is also available to our customers who need information regarding products we don't have in our product line. Both devices meet the current testing equipment standards for ASTM (U.S.) and/or EN (Europe). We are pleased to offer this testing service to Majestic customers.

CPPT Machine

The CPPT (Cut Protection Performance Test) machine measures the cut resistance of any material by measuring the weight required to cut through the material with a blade moving 25mm (one inch). The more weight that is required to cut the material, the higher the cut resistance of that material. The gram measurement of weight yields the “Cut Resistance Level” used today to determine the effectiveness of a glove or sleeve in a work environment where cuts or lacerations are a problem.

(Test ASTM F1790-97)

How is protective clothing evaluated for cut resistance?

- In the European market, gloves are evaluated according to EN 388, the mandatory performance standard for all gloves as standardized and regulated by the CEN. The method uses a constant weight on a circular blade that is moved back and forth across a specimen by the test machine. The machine also rotates the blade against the direction that it is being moved, which intensifies the slicing action.
- In the U.S. an entirely different method was developed by ASTM, method F1790.

Before 2004, previous versions of this method called for a report of load that causes cut through in one inch (25 mm, not 20 mm). When comparing data, be certain that all of the tests were conducted according to the same edition of the standard. ASTM F 1790-97 is the older version that uses the longer cut distance and is still referenced by ANSI/ISEA to determine the performance levels of gloves.

A Word About “Cut Level Ratings”

ANSI (U.S.) and EN (European) cut resistant tests are not the same and the resulting Cut Level ratings can be easily misunderstood. For both tests a higher rating means a higher cut resistance number (1 thru 5) but it's very important to compare gloves using the same standard. An EN Cut Level 3 rating could be an ANSI Cut Level 2. Most U.S. companies currently use the EN standard as does Majestic in this Product Guide.

Abrasion Testing Machine

The Nu-Martindale abrasion testing machine precisely abrades the surface of a sample material (leather, cotton, synthetic, etc). Based upon the change in the surface of the material and the number of rubs (time) taken for the change to occur, the material's abrasion resistance can be accurately measured.

The abrasion resistance of glove material is extremely important to the life of any glove in a work environment. The longer a glove lasts, the more financial savings can be realized by the end user and the more confident a worker becomes with the hand protection products they use. Majestic routinely checks the abrasion resistance of many gloves in the product line as well as new materials being considered for its product line.

ASTM D4966-12e1 Abrasion Test

Vertical Flame Testing

Majestic will be embarking on a new venture into Flame Resistant clothing. As such, we believe that proper testing in house, allows us to be better students in the field. One method that we employ in house is the vertical flame test. With this equipment, we can test new materials, just to see if they are worth what is being claimed. The vertical flame test will tell us if we need to research further by having new material sent to a proper certification lab.

ASTM F2302-08 D6413 / D6413M

Significance and use

This test method determines the response of textiles to a standard ignition source, deriving measurement values for after flame time, afterglow time, and char length.

The vertical flame resistance, as determined by this test method, only relates to a specified flame exposure and application time.

This test method maintains the specimen in a static, draft-free, vertical position and does not involve movement except that resulting from the exposure.

Test Method D6413 has been adopted from Federal Test Standard No. 191A method 5903.1, which has been used for many years in acceptance testing.

Vertical Flame Test Equipment

EN388:2003, 6.1 Abrasion Test

Tear, Puncture, Tensile Elongation, Flexibility and Coefficient of Friction

At Majestic we are “Glove Geeks.” We love technology that allows us to go beyond the normal expectations of a glove company. We are not just a manufacturer or importer; we believe in what we do and want you to believe in us. Majestic continues to reinvest in testing equipment that lets us know what will keep you safe. Below are some images of what we can do.

Tear Test
 EN 388:2003, 6.3
 ASTM 1938-08
 ISO 13937-4:2000

Puncture Test
 EN388:2003, 6.4
 ASTM F2878-10, F1342

Tensile Elongation Test
 ASTM D412-97
 ISO 37:2005

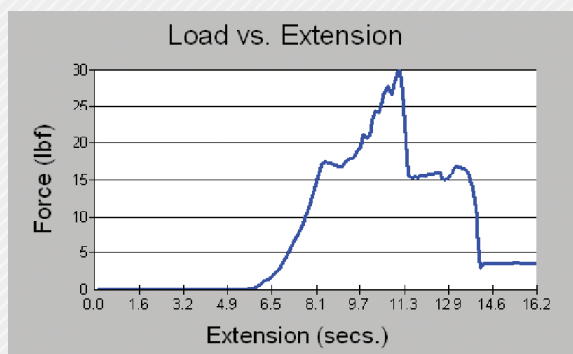

Flexibility Test
 ASTM D6828-02

Coefficient of Friction Test
 ASTM D1894-08
 ISO 8295:1995

Thread Strength Test
 ASTM D2256 / D2256M-10
 ASTM D5035-06

Although we are not a certified laboratory, here is a list of tests that we can perform regarding tear, puncture, tensile elongation, flexibility, coefficient of friction and thread strength:

ASTM D6828-02 Flexibility Test

ASTM D412-97 Tensile Elongation Test

ASTM F2878-10, F1342 Puncture Test

EN388:2003, 6.4 Puncture Test

ASTM D1894-08 Coefficient of Friction Test

1510

Our most popular driver. Top grain A-grade cowhide leather, keystone thumb, gunn cut, Shirred back. Tough double-stitched leather hem locks side seam and prevents seam blowout. **XS-XXL**

1510G Gold A-grade cowhide with keystone thumb. **XS-XXL**

1510BA Extra heavy B-grade leather. **XS-XXL**

1510K

Top grain A-grade cowhide, keystone thumb, rolled hem, Kevlar sewn. **XS-XXXL**

1510BAK Extra heavy B-grade cowhide, keystone thumb, rolled hem, Kevlar sewn. **XS-XXXL**

2510HVO

B-grade cowhide, keystone thumb, bias tape color hem, high visibility orange fingers. **S-XXL**

DRIVERS GRAIN COWHIDE

1510B

B-grade cowhide leather, gunn cut, keystone thumb, shirred back. Color-coded bias tape sewn hem for sizing identification. (For kids sizes, see "Small Sizes.") **XXS-XXXL**

2510 BC-grade leather. **XS-XXXL**

2510B Industrial-grade leather. **S-XXL**

2510KV BC-grade leather, Kevlar lined, Kevlar sewn. **S-XXL**

1510W

Premium A-grade grain cowhide leather, wing thumb, gunn cut, shirred back, Kevlar sewn. Color-coded bias tape sewn hem for sizing identification. **XS-XL**

2505

B-grade grain cowhide driver, straight thumb, gunn cut and color-coded bias tape hem indicating size. **S-XL**

2505B Industrial cowhide. **S-XL**

2505F

B-grade fingerless cowhide driver, straight thumb, gunn cut and color-coded bias tape hem indicating size. **S-XL**

DRIVERS

DEERSKIN, ELKSKIN, GEMSBOK

1541

A-grade grain deerskin driver with keystone thumb and leather sewn hem. Exceptionally soft and comfortable with a shirred back. (For kids sizes, see "Small Sizes.") **XS-XL**
1541B B-grade. **XS-XXL**

1539

Gembok driver. This is a unique leather that has the fit, feel and performance of deerskin, but at significantly less cost. This is an excellent glove for industrial applications, where a deerskin product is preferred but appearance consistency is not important. Soft grain gembok driver with keystone thumb, gunn cut, shirred elastic back and rolled leather hem. **XS-XL**

1547

A-grade heavyweight elkskin with a keystone thumb and shirred back. **XS-XXL**
1661 Economy elkskin driver, keystone thumb, leather hem. **XS-XXL**

1562

Top full grain medium elkskin driver, keystone thumb, seamless palm, shirred elastic back, with double sewn rolled leather hem to prevent side seam blowouts. **S-XL**
1563T Thinsulate® lined (see "Winter Lined"). **S-XL**

Thinsulate
INSULATION

1553

One of our most comfortable and stylish gloves. Top-quality black deerskin with a keystone thumb, gunn cut, shirred elastic back and rolled leather hem. **XS-XL**

1567

Top full grain B-grade medium weight elkskin driver with reverse grain back. With keystone thumb, gunn cut, shirred elastic back and rolled leather hem. **XS-XL**

1543

Top grain deerskin palm with a reversed grain back and seamless clute cut style palm. Reverse gunn cut back. Exceptionally comfortable. **XS-XL**

1564

A-grade medium weight elkskin with double palm. Gunn cut with keystone thumb, inside seam index finger, shirred back and rolled leather hem. **XS-XL**

1564D Deerskin version of the 1564 **XS-XL**

1565 Single palm elkskin. **XS-XL**

2-Ply

1549

Top grain medium elkskin, wing thumb, rolled leather hem. **S-XXL**

1549D Top grain deerskin, wing thumb, rolled leather hem. **S-XXL**

1537

Soft split deerskin, keystone thumb and double stitched leather hem for added wear. **XS-XL**

1569 Split deerskin, clute cut work glove, straight thumb with thumb strap and split deerskin cuff. **S-XL**

DRIVERS

PIGSKIN, GOATSKIN, CAMEL

1510PK

Heavier weight grain pigskin, seamless index finger, Kevlar sewn, color-coded size tag. XS-XXL

1554B

B-grade grain goatskin with straight thumb and bias tape hem. S-XXL

1556

Goatskin, straight thumb, clute style. XS-XL

1554KV

A-grade goatskin, keystone thumb, Kevlar Lined. S-XXL

1510P

Top-grain pigskin, keystone thumb, leather hem, shirred back. A fully machine washable variation of our most popular cowhide driver, the 1510. **XS-XL**

1510PB B-grade pigskin, keystone thumb, bias tape hem. **S-XL**

2510P Industrial-grade pigskin, keystone thumb, color-coded bias tape hem. **XS-XL**

1512P

Brushed heavyweight pigskin, shirred elastic back and rolled leather hem. Kevlar sewn. **XS-XL**

1510BCK

A-grade grain camel hide, keystone thumb, shirred back, leather rolled hem. **XS-XL**

1566

Double palm, gold goatskin, seamless index finger. **XS-XL**

2-Ply

1555

Our best selling goatskin driver. Soft leather in a rich pearl color with a keystone thumb, gunn cut, shirred back and rolled leather hem. **XS-XL**

1554K A-grade lightweight stretched leather, with a bias tape hem. **XS-XL**

1558 Heavier duty lanolin goatskin with a sewn-in knit wrist for added comfort. **XXS-L**

1554HVO/1554HVV

1554HVO A-grade goatskin, keystone thumb, color-coded bias tape hem, high visibility orange fingers. **S-XL**

1554HVV A-grade goatskin, keystone thumb, color-coded bias tape hem, high visibility yellow fingers. **S-XL**

DRIVERS COMBINATION, SPLIT LEATHER

1532

Our best combination driver. B-grade grain leather palm, split back, shirred back and sewn with Kevlar. Inside-sewn index finger for added comfort/wear. Double-stitched rolled leather hem prevents side seam blowout. All grain keystone thumb for added comfort and durability. **XS-XXL**

1533

Top grain cowhide with keystone thumb, natural split back and cloth hem. **XS-XXL**

1533GS Grain goatskin palm and cow split back. Keystone thumb, cloth hem. **XS-XXL**

1507

Split select cowhide with straight thumb, shirred back, bias tape hem and gray color. **XS-XL**

1512 Keystone thumb. **XS-XL**
(For kid's sizes, see "Small Sizes.")

1512R

Side split camel leather with a keystone thumb, shirred elastic back and double-stitched rolled leather hem. **XS-XL**

1512B Select cowhide. **XS-XL**

1532B

Combination driver B-grade cowhide leather palm with keystone thumb, gunn cut, split back, seamless index finger, shirred back. Kevlar sewn with colored bias tape hem for size identification. **XS-XXL**

1532BP Combination pigskin driver, regular thread. **S-XL**

1551

B-grade wing thumb cowhide combination driver, with full grain wrap around index finger. Gunn cut, shirred elastic back, rolled leather hem, Kevlar sewn. **S-XL**

1533B Russet split back, lap seam index finger, color-coded bias tape hem, regular thread. **XS-XXL**

2503

A-grade grain palm, straight thumb, gray split back, lap seam index finger, regular thread. **XS-XXL**

1500K

A-grade driver, cowhide palm with fabric back, wing thumb. **S-XL**

1950

Top grain cowhide, high visibility fluorescent orange poly-woven back, 3M® reflective knuckle strap. **S-XL**

Why Combination Drivers?

The protection and wear properties are where you need them. Less expensive split leather is used on the back, where the wear properties of grain leather have no added value, giving you the most glove for your buck. In the case of the 1532B, this allows us to include additional features such as Kevlar stitching and a seamless index finger at no additional cost compared to an all-grain driver.

DRIVERS

BALL AND TAPE, ADJUSTABLE STRAP FASTENERS

What is a "Ball and Tape closure," and why is it used?

Ball and Tape closure has been around for a long time. Literally a small plastic ball attached to a strap of leather, it is used to provide a more custom fit on drivers gloves, and prevents debris from falling back into the opening of the cuff. Most drivers glove styles today offer an elastic back for easy donning and doffing. We also offer styles that have a metal tab and strap closure for the same desired level of fit. Majestic offers several styles of gloves with these features.

1550

AB-grade heavy cowhide, double palm, Kevlar sewn, with metal buckle and strap on the wrist. **XS-XL**

KEVLAR

2-Ply

1509

A-grade cowhide driver with keystone thumb and color-coded bias tape hem. Tough double-stitched leather hem locks side seam, preventing seam blowout. Inside forefinger seam prevents thread blowouts. Leather wrist strap ensures the right fit. **XS-XL**

1509K

Flat index finger, lap seam, and ball-and-tape wrist strap. **XS-XL**

1509B

B-grade cowhide, straight thumb, ball-and-tape wrist strap. **S-XL**

1509BCK

A-grade camelhide, keystone thumb, with ball-and-tape wrist strap. **S-XXL**

1512RK

Split camel hide with a ball-and-tape wrist. Russet color. **S-XL**

1546T

Black deerskin with reversed back, grain palm, and Thinsulate® lining for great winter warmth. Keystone thumb, rolled leather hem, and adjustable leather strap. **XS-XL**

Thinsulate
INSULATION

1544T

Gold deerskin with reversed back, grain palm, and Thinsulate® lining for great winter warmth. Keystone thumb, rolled leather hem, and adjustable leather strap. **XS-XL**

Thinsulate
INSULATION

MECHANICS STYLES

LEATHER, DEER, GOAT

2150

The comfort and feel of deerskin in a true mechanics style glove. One of our most comfortable, best fitting gloves. Features a seamless palm, wing thumb, stretch knit back and neoprene knuckle area. Gold palm, elastic wrist and Velcro closure. **XS-XXL**. (For lined version see "Winter Lined" and for kid's gloves see "Small Sizes.")

2148

Same as 2150, except with mesh back for ventilation. **XS-XXL**

2148 / 2149
Mesh Back

2151

The comfort and feel of deerskin in a true mechanics style glove. One of our most comfortable, best fitting gloves. Features a seamless palm, wing thumb, stretch knit back and neoprene knuckle area. Black palm, elastic wrist and Velcro closure. **XS-XXL**. (For lined version see "Winter Lined.")

2149

Same as 2151, except with mesh back for ventilation. **XS-XXL**

2150DP

Grain deerskin with patched palm, thumb crotch area and fingertips for added protection and wear. Vented gussets, stretch knit back, neoprene knuckle area and Velcro wrist closure. **XS-XXL**

2153

Premium white grain goatskin palm, black stretch knit back with neoprene knuckle area and Velcro wrist closure. **XS-XXL** (For lined version see "Winter Lined" and for kid's gloves see "Small Sizes.")

2153D

Premium white grain goatskin palm, black stretch knit back with neoprene knuckle area, slip-on. **XS-XXL**

2150GR

The comfort and feel of deerskin in a true mechanics style glove. One of our most comfortable, best fitting gloves. Features a seamless palm, wing thumb, green stretch knit back and neoprene knuckle area. Elastic wrist and Velcro closure. **XS-XXL**

2140

Deersplit palm with black stretch back and Velcro wrist closure. Extraordinary comfort and fit. **XS-XXL**

Pre-Curved Design 

All Majestic mechanics gloves feature a pre-curved finger design following the natural contours of the hand. This results in a much more comfortable glove.

Quality Is No Accident.

Slip-on driver style with beige pigskin palm, shirred wrist, black stretch knit back and neoprene knuckle area. **XS-XXL**

2130R / 2130G / 2130BK / 2130BL

Gold brushed pigskin palm with a stretch knit back and Velcro wrist closure. Neoprene knuckle area. Available in four stretch knit back color options. **XS-XXL**

- 2130R Red
- 2130G Green
- 2130BK Black
- 2130BL Blue

2139BK

ARMOR SKIN™, synthetic leather, reinforced with PVC double palm, knit back, Velcro closure. **XS-XXL**

MECHANICS STYLES

ARMOR SKIN™, GENERAL PURPOSE

Why ARMOR SKIN™?

ARMOR SKIN™ was developed to keep the worker comfortable and safe. Leather goods are a commodity, and as such are subject to wild fluctuations in the market. With hide shortages worldwide, we at Majestic were driven with the task of finding “something else” out there. With ARMOR SKIN™, we found it!

ARMOR SKIN™ is the one of the toughest materials on the market—a true synthetic that can provide unmatched abrasion resistance. It is literally stronger than leather. We have measured this by taking samples of material and placing them on our in-house abrasion test machine. The results speak for themselves—we were able to develop a material that provides better abrasion resistance than cowhide and pigskin, and with a far superior fit and feel factor.

ARMOR SKIN™—More wear and abrasion resistant than leather and pound for pound the toughest synthetic glove material available.

Style options include slip-on or with a Velcro wrist strap. The black style is available unlined or with your choice of three levels of cold protection. Great fit, feel and comfort.

All styles come tagged. Available in sizes XS-XXL

Abrasion Test Results

ARMOR SKIN™ test results proved that it is more wear and abrasion resistant than both pigskin and cowhide.

2137R / 2137BL / 2137BK

ARMOR SKIN™ synthetic leather palm, knit back, Velcro wrist.

- 2137BK** Black. XS-XXL
- 2137BL** Blue. XS-XXL
- 2137R** Red. XS-XXL

2137HY / 2137HO

21245HY Kevlar lined. S-XXXL

21247HY Thinsulate® lined and waterproof. S-XXXL

A2S42Y Lined with Alycore, no palm pads.

Cut Level 5 S-XXXL

(See page 72 for more details on Alycore)

21252HO

ARMOR SKIN™ Knucklehead Omega 1, 50% thicker synthetic leather palm with full finger and backhand TPR protection, ARMOR SKIN™ high visibility orange. S-XXXL

Grip: Double Wishbone PVC Palm

All styles feature a double wishbone PVC palm that is triple sewn, increasing the grip strength. The Majestic Knucklehead X10 has been tested and has a 21% increase in static coefficient of friction and 35% increase of kinetic COF over the Kong.

No Velcro: Elastic Wrist

To decrease the chances of a snag or pulling of the wrist closure the Velcro closure has been replaced with an elastic wrist.

Cut Resistance: Alycore and Kevlar provide incredible cut resistance. The 21245 is rated a CE Cut Level 4 and the A2S42Y achieves ANSI 5 cut resistance!

Winterlined: The 21247 is lined with Thinsulate to provide a barrier from water, wind, and cold weather.

Water and Hydrocarbon proof: Like the 21247, the 21243 has a breathable water proof bladder to provide comfort while protecting against water.

2127HY

ARMOR SKIN™ synthetic leather X20, silicone grip on index and middle tip, reinforced double stitched palm, Neoprene stretch back, reinforced finger guards. Neoprene wrist and Velcro closure. XS-XXXL

2163

Extremely tough extrication gloves for emergency rescue work. The form fit design is contoured, making this an excellent fitting glove with fantastic dexterity. Kevlar loaded Armortex® reinforced palm patches, stainless steel reinforced padded knuckles and Cordura® dynamic stretch back. Elastic gusseted cuff to keep debris out. XS-XXL

2163NL No logo for personalization.

2164 Extended cuff. XS-XXL

LEATHER PALM HEAVYWEIGHT

You Don't Create a Premium Glove by Cutting Corners

When you have a tough job, you need the 1800 series gloves. The "Pit Bull" part of the series (items 1800-1849) is made with a heavy M weight (3.5-4 oz.) side split, double chrome tanned leather, special choice materials, and is sewn with Kevlar thread. By comparison, a good "regular duty" glove is generally made from 3-oz. weight leather (20% lighter). The Pit Bulls are in a class by themselves, the gloves most workers prefer who require the greatest degree of hand protection. In the balance of our 1800 series, you will find the toughest work gloves in the United States! All 1850 series gloves are made from HM weight (4-4.5 oz.) side split leather, specially selected and purchased for our purposes, and then sewn with Kevlar thread.

What is it? **KEVLAR**

Kevlar thread is used on all our 1800 series gloves because it is pound-for-pound five times stronger than steel. Its superior strength and heat resistance make Kevlar the standard for premium work gloves and welders gloves. In our continuous quest to use only the best materials for premium gloves, Kevlar is the only choice.

Leather Weights Explained

Wt.	Oz.	Decimal Inches		Fractional Inches		mm (millimeters)	
		From	To	From	To	From	To
LL	2 - 2.5	.031	.039	1/32	5/128	0.8	1.0

Choosing the Inner Liner

Each type of winter glove liner has unique properties and understanding the differences will make your glove choice much easier. The purpose of all liners is to trap dead air between your hand and the outside cold. This air acts as a thermal buffer, keeping the warmth inside the glove. The choice of liners is dependent upon the glove, outside temperature and the fit and feel desired from the glove. Many gloves are lined with **3M® Thinsulate®** Insulation, which is microscopic fibers engineered to trap dead air with more efficiency, providing more warmth with less bulk.

1542T

Our best winter deerskin driver with keystone thumb, shirred back and Thinsulate® lining for added warmth. Rolled leather cuff for longer wear. **S-XL**

WINTER LINED COATED AND UNCOATED PALMS

3422P

Fingerless Thinsulate® lined, two-ply rag wool with sewn-on leather palm for added wear and grip. Knit in hood attaches with Velcro to glove back when open. When needed the hood can cover the fingertips for extraordinary comfort and warmth. **XS, M-XL** (For kid's sizes, see "Small Sizes.")

3422 Fingerless, with hood, without leather palm. Thinsulate® lined. **L only.**

3425

Ragg Wool One-Ply Medium Weight

Unlined single-ply ragg wool glove provides warmth at moderately low temperatures. Good choice as heavyweight liner. **S, L**

3423 Full-fingered plain palm. Thinsulate® lined. **M-XL**

3426 Full finger, PVC dots on palm. **S, L**

3424

Ragg wool two-ply heavyweight, fingerless, without hood or leather patch palm. **L only.**

3427

Ragg wool two-ply heavyweight, fingerless. **S, L**

3428 Fingerless, PVC dots on palm. **S, L**

3396HO / 3396HY / 3396BK

3396HO Winter/freezer wear heavyweight napped terry, high visibility orange knit with foam latex dipped palm. **S-XL**

3396HON Same as 3396HO but no Penguin label, for customization. **S-XL**

3396HY Winter/freezer wear heavyweight napped terry, high visibility yellow knit with foam latex dipped palm. **S-XL**

3396HYN Same as 3396HY but no Penguin label, for customization. **S-XL**

3396BK Winter/freezer wear heavyweight napped terry, black knit with foam latex dipped palm. **S-XL**

Also available in summer versions.

3430

Our best glove liner made of Dupont Thermalite® hollow core fiber—wicks moisture from skin surface for improved warmth. The best there is, anywhere. **One size fits all.**

3430B Blue. **One size fits all.**

34-1570

Dyneema knit, latex coated palm, winter lined, **Cut level 5**. **S-XXL**

3388

Winter version of the popular Atlas style. Napped inside for warmth with rubber coated wrinkled palm for added grip and protection from moisture. **S-XL**

3388BK Heavy napped terry, winter weight latex palm dipped string knit. Knit wrist. **S-XL**

3703

Brown double-coated PVC coating on 13-gauge seamless knit shell with removable thermal lining. Special compound remains soft even in extreme low temperatures. Ergonomic design. Rough finish for excellent wet grip, 12" long. **M-XL**

3703 Shown with removable attached liner.

WINTER LINED

PVC

3371C

PVC caramel color work glove, foam lined, with safety cuff. **L only.**

3370

PVC fluorescent orange, foam lined, with smooth finish for added wet grip. Knit wrist cuff. **L only.**

3371 Safety cuff. **L only.**

3370G

PVC fluorescent orange, foam lined, heavy grit finish, with knit wrist. **L only.**

3371G Safety cuff. **L only.**

3374 / 3375

3374 PVC fluorescent orange, foam lined, with sand finish for added wet grip, 12" long. **L only.**

3375 Mitten, smooth finish, 12" gauntlet. **L only.**

SYNTHETICS

CHEMICAL RESISTANT—SUPPORTED

3702A

High Performance PVC

Atlas. Exceptional wet-grip capability in an extremely pliable double-dipped 12" PVC glove. Ideal for the fishing industry, gardening, and water or petrochemical applications. Interlock liner and ergonomic form provide unusual comfort. **S-XXL**

3706 Clear vinyl sleeve attached to cuff, 25" length. **S-XL**

3704A

High Performance PVC

Atlas. Designed for oil-related applications. This triple-dipped PVC glove is ergonomically formed with interlock liner for added comfort. The finish provides excellent grip for oil or other petroleum products. 12" long. **S-XXL**

3362G

PVC / Nitrile Blend

Fully coated PVC and nitrile blend with an uneven, raised finish. Provides exceptional grip. Interlock lined for comfort. 12" long. **L only.**

3360G Knit wrist. **L only.**

3364G Gauntlet, 14". **L only.**

3363Y

Yellow PVC

PVC dipped with a smooth finish and interlock lined for comfort. This glove provides excellent protection from a variety of chemicals, oils and greases. 12" long. **L only.**

3359Y Yellow, knit wrist, open back. **L only**

3361Y Yellow, knit wrist, fully coated. **L only**

3361 / 3363

Smooth Finish Black PVC

Smooth finish PVC for general purpose industrial applications such as chemical-based or petroleum-based product handling. **L only.**

Interlock Lining

- 3357** Slip-on, 11".
- 3359** Knit wrist, open back.
- 3361** Knit wrist, fully dipped.
- 3363** Gauntlet, 12".
- 3365** Gauntlet, 14".
- 3367** Gauntlet, 18".

Jersey Lining

- 3361J** Knit wrist, fully dipped.
- 3357J** Slip-on, 10".
- 3363J** Gauntlet, 12".

3363CJ

Caramel PVC

Caramel, jersey 12" gauntlet. **M-L**

3361CJ Caramel, jersey lined, knit wrist. **L only.** (See page 42 for winter lined caramel versions.)

Smooth: The inside glove is "singed" by flames before dipping to remove small lint balls which occur naturally on all knitted cloth. The idea that smooth plastic is also slick is much more perception than reality. Actually, smooth plastic gloves provide an excellent grip for most objects.

Sand: After the initial dipping, sand-like polymers are applied to the coated glove either by spraying or re-dipping before the original coat hardens.

Rough: The inside glove is unsinged so that the surface has a "pebbled" appearance.

Uneven Raised: As on the 3362G, the surface of the glove is chemically treated to cause an overall matte finish with irregular etched grooves.

Embossed / Textured: Unsupported glove terms. The form used to dip into the molten latex or plastic is etched with a grooved pattern so that when the glove is turned, the surface of the palm has a pattern.

Grit: As on the 3370G, PVC chunks, larger than sand, are sprayed onto the dipped glove while plastic is still molten.

SYNTHETICS

CHEMICAL RESISTANT—SUPPORTED / UNSUPPORTED

Actifresh

All Majestic interlock or jersey lined nitrile and neoprene dipped gloves are treated with Actifresh, an antibacterial agent which promotes hygiene and freshness. It retards odors and eliminates germs.

4001

Neoprene smooth finish, interlock lined, knit wrist. **L only.**

4002 12" length. **L only.**

4003

Neoprene rib finish, interlock lined, 14" length. **L only.**

4072

Flock lined, 18 mil neoprene with 13" cuff. **S-XXL**

4073 31 mil. **S-XL**

4005

Neoprene provides resistance to a wide range of hazardous chemicals, such as alcohols, oils, caustics and inks, with the added benefit of good abrasion resistance. Contoured fit, double-dipped sand finish, interlock lined, 12" length. Treated with Actifresh to retard bacterial growth and odors and to promote freshness. **S-XL**

4006 14" gauntlet. **L only.**

4004

Neoprene double-dipped sand finish, interlock lined, 12" length. **S-XL**

3300IF / 3352 / 3350

Latex

3300IF Unlined canner's style, 19 mil, natural color. **S-XL**

3350 Flock lined, household 16 mil, yellow. **S-XL**

3351 Household, one pair retail poly pack. **S-XL**

3352 Unlined, 19 mil, blue. **S-XL**

3353 Flock lined, 20 mil, blue. **S-XL**

3355

Heavy duty latex, flock lined, 30 mil, orange. **S-XL**

4055

Neoprene/Latex Blend

Neoprene over latex provides added chemical resistance with the comfort of a latex glove.

Palm and fingers are diamond embossed for better grip. Flock lined, 28 mil, 12" length. **S-XXL**

3218 / 3395

3218 Nitrile coated on a seamless liner. This 12" long glove has a micro grip surface for excellent grip in wet and slippery applications. Coating is not completely liquid proof, and not recommended for chemical protection. **XS-XL**

3395 Rubber dipped. **XS-XL**

3245

Nitrile

15 mil nitrile, flock lined for added chemical protection, snag, puncture and abrasion resistance. All styles are 12" long except where noted. **S-XXL**

3240 Unlined, 11 mil nitrile. **S-XXL**

3247 Unlined, 15 mil nitrile. **S-XXL**

3248 Flock lined, 18 mil nitrile. **S-XXL**

3249 Unlined, 22 mil nitrile, 18" long. **M-XL**

Diamond Grip Pattern:

The form used to dip into the molten latex or plastic is etched with a grooved pattern so that when the glove is turned, the surface of the palm has a diamond pattern.

Chemical Permeation and Degradation

It is recommended that you perform your own evaluation based on actual working conditions. Most products chemical manufacturers market are a compound or blend of different chemicals.

The first step in selecting any glove is to consult the chemical manufacturers MSDS (Material Safety Data Sheet) for hand protection requirements.

See www.MajesticGlove.com, product literature, for permeation and degradation details. Permeation and degradation charts are intended as a guide only.

Build a Bucket

Do you know about Majestic Glove's "Build a Bucket" program? This is a great program for areas that use a high volume of disposable gloves and need something more than just a box that is easily destroyed or lost. Buckets are refillable, and are great for areas where a higher degree of sanitary storage is needed. Dairy farms, food plants and other processors can use this product. Note the part numbers: item numbers ending in "BG" are refills for our buckets. Our buckets are high grade and are FDA, NMFC and UFC approved and are easily reused. Ask your Majestic Glove representative about "Build a Bucket."

Superior micro foam nitrile palm, dotted palm on nylon shell. **S-XXL**

Coefficient of Friction

These gloves represent some of the finest technology available today. Majestic is on the cutting edge of glove technology and is embracing efficiency of friction, or COF. Technically, friction is the force that resists the relative motion of solid surfaces, fluid layers, and/or material elements when they move against each other. In simpler terms, the less friction there is, the more slippery the surface. When you consider holding a tool that has a slippery surface, you would need to grip it tightly. If you wore a glove that has high anti-slip properties, or high COF, you would use less strength to perform the task, and by using less strength you limit stress and fatigue on your body.

Key Terms:

Static Friction—The force needed to move an object

Kinetic Friction—The force needed to keep the object in motion

3237

Two color $\frac{3}{4}$ micro foam dip, reversed diamond grip equates to superior slip resistance, over closed cell full dip nitrile on nylon shell. **S-XXL**

3228 / 3228K / 3228F

3228 Micro foam nitrile palm, on nylon shell. XS-XXL

3228K ¾ dip micro foam nitrile palm, on nylon shell. XS-XXL

CUT RESISTANT DYNEEMA COATED

Majestic Glove is a Licensed Dyneema® Partner

Majestic Glove has been selected by DSM as a Dyneema® license partner. Majestic was selected based upon a commitment to providing quality hand protection and a focus on the benefits of the Dyneema® fiber. This mutual commitment with DSM ensures our customers purchase authentic, tested, Dyneema® cut-resistant products. Dyneema® offers an unmatched combination of fit, feel and comfort in a cut-resistant glove.

- Dyneema® gloves mold naturally to the hand, providing comfort and confidence to the worker exposed to the possibility of cut injuries.
- Dyneema® is pound-for-pound fifteen times stronger than steel.
- Resistant to many chemicals and ultraviolet light, Dyneema® is also easily laundered.
- It is more durable than polyester and is 40% stronger than Aramid fibers.
- Dyneema® is usually coated to add grip, chemical resistance or added abrasion resistance.
- Majestic offers one of the most complete lines of Dyneema® cut-resistant products available today.

Gloves made with Dyneema®, the world's strongest fiber™

In addition to protection, there are many other benefits to using cut-resistant gloves made with Dyneema®. They are lightweight and very comfortable, so employees will wear them for longer periods, reducing injuries and the associated costs. In addition, the high abrasion resistance of Dyneema® fiber means that the gloves can be washed and re-used several times, increasing their lifetime and cost-efficiency.

3437

PU, Ring Spun Yarn, Gray

Ring spun Dyneema® 13-gauge seamless knit. 15% more cut-resistant than continuous fiber Dyneema®. Gray shell with black polyurethane palm coating for industrial applications.

Cut Level 3 S-XXL

3437FN Same classic fit as the 3437 but with added benefit of foam nitrile palm. Excellent for oily applications. **XS-XL**

3435

PU, Filament Yarn, White

Dyneema® continuous fiber 13-gauge seamless knit with white polyurethane palm coating.

Cut resistance equivalent to Kevlar® with ten times greater abrasion resistance. Dyneema® is chemically inert so it is an excellent choice for food applications where gloves need to be sanitized with chlorinated solutions.

Cut Level 3 S-XXL

3435N Heavier knit than the 3435. Continuous fiber, 13-gauge knit with white PU coating.

Cut Level 3 XS-XXL

34-1305

PU, Filament Yarn, Gray

Gray shell with gray polyurethane palm coating for industrial applications. **Cut Level 3 S-XXL**

34-1300 PU palm coated, gray shell, gray palm. Super soft and flexible. **Cut Level 3 S-XXL**

34-1500 PU palm coated, gray shell, gray palm. **Cut Level 5 S-XXL**

34-1350

Rubber, Filament Yarn, Gray

Continuous fiber gray shell with the added benefit of a latex palm coating. Black latex. **Cut Level 3 XS-XXL**

34-1550 Gray shell, black latex palm coated. **Cut Level 5 S-XXL**

34-1360

Nitrile, Filament Yarn, Gray

Continuous fiber gray shell with abrasion-resistant black nitrile coated palm. **Cut Level 3 S-XXL**

34-1365 Black foam nitrile coated palm, gray shell. **Cut Level 3 S-XXL**

34-1560 Black nitrile coated palm, gray shell. **Cut Level 5 S-XXL**

34-1565 Black foam nitrile coated palm, gray shell. **Cut Level 5 S-XXL**

3435NHY

PU, Filament Yarn, High Visibility Yellow

Dyneema® continuous fiber 13-gauge high visibility, seamless knit with white polyurethane palm coating. Cut resistance equivalent to Kevlar with ten times greater abrasion resistance. **Cut Level 3 S-XXL**

3435NHO

PU, Filament Yarn, High Visibility Orange

Dyneema® continuous fiber 13-gauge high visibility, seamless knit with white polyurethane palm coating. Cut resistance equivalent to Kevlar with ten times greater abrasion resistance. **Cut Level 3 S-XXL**

34-1570

Winter Dyneema

Black Dyneema® knit, black latex palm, winter lined. **Cut Level 5 S-XXL**

34-2510

White Dyneema®, antimicrobial, 10-gauge.
Cut Level 5 XS-XXL

34-2511 Gray Dyneema®, antimicrobial,
10-gauge. **Cut Level 5 XS-XXL**

34-2530

White Dyneema®, antimicrobial, 13-gauge.
Cut Level 5 XS-XXL

34-2531 Gray Dyneema®, antimicrobial,
13-gauge. **Cut Level 5 XS-XXL**

Dyneema® Food Handling Glove Series

The Majestic cut-resistant glove series for food handling is made with a blend of Dyneema® and stainless steel for protection from cuts and abrasion, and a covering of textured polyester for improved grip. The series also features a permanent antimicrobial to prevent the growth of bacteria or fungus on the glove. The antimicrobial is extruded into the material so that it does not wash out.

The series is available in three weights: a lightweight 13-gauge, with an ANSI Level 3, CE level 5 protection rating; a medium weight 10-gauge, with an ANSI Level 4, CE Level 5 cut protection rating; and a heavyweight 7-gauge, with an ANSI Level 5, CE Level 5 cut protection rating. The gloves are made to withstand repeated laundering and may be bleached. The gloves are made entirely with FDA accepted materials, and the antimicrobial is FDA approved for intimate contact with food.

* Meets FFDC (Federal Food Drug and Cosmetics Act) for use in federal inspected meat and poultry plants.

** Antimicrobial accepted

34-2570

White Dyneema®, antimicrobial, 7-gauge.
Cut Level 5 XS-XXL

34-2571 Gray Dyneema®, antimicrobial,
7-gauge. **Cut Level 5 XS-XXL**

CUT RESISTANT
DYNEEMA

Dyneema® Sleeves

Dyneema® cut-resistant sleeves are comfortable, formfitting, and actually vent heat to remain cool. These sleeves are resistant to snagging and tears and are launderable or may be dry cleaned.

CUT AND PUNCTURE RESISTANT ALYCORE

Breaking News!

Majestic is proud to announce the licensing of Alycore™. After more than 16 years in development, Alycore™ has arrived, changing the safety industry forever. Why? Patented Alycore™ offers cut, puncture and needle resistance like no other product has before. Composed mostly of super-thin threads of iron and carbon, Alycore™ is lightweight, flexible, breathable, recyclable, and washable while providing ultimate protection. One layer of Alycore™ provides over 2730 grams, or over 6 pounds, of cut resistance!

When a needle makes impact with an Alycore™ glove, the needle will actually bend or break! When handling broken glass with Alycore™ gloves, even the smallest of shards will not penetrate and cut the hand.

Whenever there are risks for cuts, scrapes, or puncture wounds, put Alycore™ to work. Majestic offers a glove for any level of protection, whether it is for your basic cut resistant needs to gloves that are able to stop 25 gauge hypodermic needles. Majestic has developed a line of gloves from 1 to 10 layers of Alycore™, in the palm only or in the palm and back, providing you an assortment of protection where the user needs it. Ten layers would give the user almost 8 times the current ANSI/ISEA cut level 5 protection. We invite our customers to contact us with unique needs currently not covered by our products, we want to take care of your hands!

**“Choose your protection, choose your layers.
We want to take care of your hands!”**

When you hold your hand up to tell someone to stop, notice the amount of resistance against your palm and fingers when you push on them with your other hand. Your palm is almost immovable, but your fingers push backwards, your thumb pushes backwards, and when you push on the back of the hand, it moves downwards. The same thought goes into the layers you choose. How much protection do you ultimately need? The uniqueness of Alycore allows you to choose the layers of protection you need. How we have designed the glove is really very simple.

You will not need as many layers of material in the fingers, the thumb and the back of the hand. They already have resistance because of freedom of movement. They have “give”. All of the Alycore gloves are designed to have twice as much cut and puncture resistance in the palm as in the other areas of the hand. Everything you need to know is in the first few characters of the part number. For example, take the **A4B37B**. The “A” stands for Alycore, the “4” stands for four layers in the fingers and the “B” stands for protection on the back of the hand equaling what is in the fingers. Four layers in the fingers and thumb, four layers on the back of the hand means you have eight layers in the palm. Now you have true puncture resistance as well!

Other options are available as well. Just need cut resistance in the fingers and palms; you might only need one layer in the fingers and two layers in the palm, like our **A1P37B**. Maybe you need some added protection. Double up your layers and add protection to the back of the handle. Try our **A2B37B**. We have multiple options to satisfy your safety requirements.

Not only does each pair of Majestic gloves featuring Alycore come with an easy protection reference guide, they have an added bonus, an extra layer of Alycore running from the inside tip of the thumb, through the thumb crotch and back up to the inside tip of the forefinger. Many of you know this area is susceptible to the greatest chance of injury. We mean it; we want to take care of your hands!

CPPT razor blade

CPP test in action

Added layer of Alycore to thumb crotch and forefinger

2145HOH High visibility orange. **XS-XXL**

Why ARMOR SKIN™?

ARMOR SKIN™ was developed to keep the worker comfortable and safe. Leather goods are a commodity, and as such are subject to wild fluctuations in the market. With hide shortages worldwide, we at Majestic were driven with the task of finding “something else” out there. With ARMOR SKIN™, we found it!

ARMOR SKIN™ is the one of the toughest materials on the market—a true synthetic that can provide unmatched abrasion resistance. It is literally stronger than leather. We have measured this by taking samples of material and placing them on our in-house abrasion test machine. The results speak for themselves—we were able to develop a material that provides better abrasion resistance than cowhide and pigskin, and with a far superior fit and feel factor.

ARMOR SKIN™—More wear and abrasion resistant than leather and pound for pound the toughest synthetic glove material available.

Style options include slip-on or with a Velcro wrist strap. The black style is available unlined or with your choice of three levels of cold protection. Great fit, feel and comfort.

All styles come tagged. Available in sizes XS-XXL

2123HVY

WELDERS

GENERAL PURPOSE

HEAT SHIELD M
A Majestic exclusive, "Heatshield" is specially treated, retardant leather (side split only).

2100

Side Split Welders

Side split with Heatshield, a special treatment to make leather fire retardant. One-piece back, ergonomically correct semi-straight thumb. Two double rows of inside elastic in the back for snugness, yet easy to throw off when necessary. Padded flame retardant sock lining in the palm and back. Weltd in all stress areas. Self-rolled hem. Kevlar sewn. **L , XL**

2101 Standard style without elastic in wrist. **S, L**
2101LHO Left hand only version. **L only.**

1514BLT

2514BL

Blue side split with Heatshield, a special treatment to make leather fire retardant. Performance thumb, plus reinforced thumb, palm and index finger seam. One-piece back, Kevlar sewn. Wide palm patch doubles palm and thumb crotch protection where wear is heaviest. Glove is sock lined. Weltd in all stress areas. Self-rolled leather hem. **L only.**

No thumb strap, select shoulder. **L only.**

1514BL No thumb strap. **L only.**
2514BLH-2514BRH No thumb strap, select shoulder, left or right hand only. **L only.**
2514BLT Select shoulder. **L only.**
2514BBLT Regular shoulder. **L only.**

1514S

Brown side split with Heatshield. Straight thumb with reinforced thumb strap, Kevlar sewn, and straight back with heel pull. **L only.**

1514 Wing thumb. **L only.**

KEVLAR

2514A

Select shoulder leather, traditional wing thumb rust color welders glove. One-piece back. Fully lined. **L only.**

2514RHO-2514LHO Right or left hand only. **L only.**

1514GR

Select shoulder leather, traditional wing thumb rust color welders glove. One-piece back. Fully lined. Green. **S-XL**

2514AS

Regular shoulder split, thumb strap. **L only.**

2514C

Regular shoulder split leather, wing thumb, gray color. **L only.**

2514CLHO Left hand only. **L only.**
2514AB Rust color. **L only.**

USG-33

A glove cover designed for the welder, but effective for any task where long wear is a challenge. Select shoulder split cowhide, full leather, adjustable strap for snugness. Sold by single glove. **One size fits all.**

USG-33L for left hand.
USG-33R for right hand.

WELDERS / SPECIALTY

TIG WELDING

3507G

Pigskin, reinforced keystone thumb, seamless index finger, Kevlar sewn, 5" split gauntlet cuff. **S-XXL**

2105

Premium heavy split deerskin TIG glove. Clute cut pattern with reinforcing thumb strap and heel pull. 4½" split gauntlet cuff. Gold color. **M, L**

Anti-Vibration Standard Compliant (ISO 10819)

Millions of workers in the United States are exposed to on-the-job hand and arm trauma associated with tool impact and vibration. In many cases, painful injuries or long term nerve damage can result from frequent exposure to tool vibration. Standards exist that specify test procedures and the performance criteria for anti-vibration gloves, but only in Europe are the standards enforced. Our 1905 has been tested and exceeds the ISO 10819 requirements for an anti-vibration glove.

1905 / 1904

Full-fingered anti-vibration glove exceeds current ISO 10819 standards for its classification. The 7-gauge knit shell is palm coated with shock absorbing material to reduce injuries and fatigue. Unusually comfortable with elastic wrist and color coded sizing. Washable. **M-XL**

1905 Full-fingered. **M-XL**
1904 Fingerless. **M-XL**

1900 / 1901

Heavy top grain leather shock-absorbing glove. Velcro fastener at the back ensures snug fit even during long jackhammer hours; Velcro band at the wrist guards against tendonitis. Patented anti-vibration polymer pads, designed for maximum comfort and protection. Wing thumb, gunn cut, with semi-open back for ventilation. Kevlar sewn. **S-XL**

1900 Fingerless. **S-XL**
1901 Full-fingered. **S-XL**

2123 / 2123HVY

2123 Reversed cowhide palm with padded patches for added protection designed to lessen hand fatigue. The back is a stretch knit with a sewn-in TPU (Thermoplastic Polyurethane) knuckle guard. Finger knuckles are protected with special rubber impact pads. A glove designed for heavy duty work! Velcro wrist closure. **S-XL**

2123HVY Knucklehead heavyweight ARMOR SKIN™, PVC reinforced patch palm, high visibility yellow knit back, TPU knuckle, reinforced finger guards, Velcro wrist. **S-XXXL**

2163

Extremely tough extrication gloves for emergency rescue work. The form fit design is contoured, making this an excellent fitting glove with fantastic dexterity. Kevlar loaded Armortex® reinforced palm patches, stainless steel reinforced padded knuckles, and Cordura® dynamic stretch back. Elastic gusseted cuff to keep debris out. **XS-XXL**

2163NL Designed with no logo for personalization. **S-XXL**
2164 Extended cuff with Velcro closure. **XS-XXL**

1516A

Quality lineman's gauntlet made of heavy top grain leather with davey tip welts at fingertips and gunn seam. Wide palm patch doubles palm and thumb-crotch protection where it's needed most. Straight thumb, fully welted. Finger seams are sewn to the rear of the fingers for best comfort, and out-seamed for minimum restriction. 5" split leather gauntlet is cloth lined. Kevlar sewn. **XXS-XXL**

1517 Elbow-length gauntlet. **XS-XXL**

1516E

Highest quality lineman's gauntlet made of heavy top grain elk. Double reinforced palm with seamless index, fully welted fingertips, straight thumb, thumb strap, heel pull, and 5" waterproof PU coated gauntlet. Kevlar sewn. **S-XXXL**

1541

Kid's size grain deerskin driver. Keystone thumb and gunn cut style. **Sizes 3, 5, 6, 7.**

1510B

Cowhide driver. Keystone thumb and color-coded bias tape hem. **Sizes 3, 5, 6, 7.**

Kid's Glove Sizing

Children's gloves are sized in accordance with age. Size 3 (ages 3–6), size 5 (ages 5–8), size 6 (ages 6–9) and size 7 (ages 7–12). Size 7 is also an adult extra-small size and can certainly be used for industrial applications. These are real gloves.

1512

Regular shoulder split driver with keystone thumb, shirred back, and color-coded bias tape hem. **Sizes 3, 5, 6, 7.**

1570 / 1571

Made for hardworking smaller hands. Side split cowhide leather palm, heel pull, fingertips and knuckle strap, with canvas back and stiff canvas safety cuff. Straight thumb with seam welts, gunn cut. External elastic band at back of wrist. **Sizes 3, 5, 7.**

1570 Safety cuff.
1571 Knit wrist.

1506

Winter lined grain cowhide with red fleece lining. Straight thumb. **Sizes 3, 5, 7.**

Nuisance Dust Mask

Features:

Soft fiber construction and adjustable nosepiece for comfort and fit

Low profile design allows for perfect vision with glasses or goggles

Easy breathing and normal speaking

Uses:

Protection against nuisance dust in the following situations

- Automotive bodyshop
- General industry
- Home & Garden environments
- Construction industry
- Agricultural work

50 ea
Respirators
#74-900

See side panel for uses and important WARNINGS

74-900

Nuisance level dust mask. 50 per box.

RESPIRATORY

Features:

- Soft closed cell foam interior nosepiece
- Soft fiber construction and adjustable nosepiece for comfort and fit
- Low profile design allows for perfect vision with glasses or goggles
- Easy breathing and normal speaking

Uses:

74-900 offers protection against nuisance dust in the following situations:

- Automotive body shop
- General industry
- Home & garden environments
- Construction industry
- Agricultural work

All other masks offer a higher level protection, as certified N95 under NIOSH.

74-910

N95 flat fold respirator. 20 per box.

74-911

N95 flat fold respirator with exhalation valve. 10 per box.

74-905

N95 cone respirator. 20 per box.

74-906

N95 cone respirator with exhalation valve. 10 per box.

PROTECTIVE CLOTHING

DISPOSABLE

Tired of blowouts?

Majestic's line of disposable coveralls is manufactured in strict accordance. We follow ANSI/ISEA 101-1996 standards for sizing.

What does this mean? When you squat, the seat allows for a generous cut, so no premature blowouts. A generous cut in the armpit means the same thing, no premature blowouts when you lift your arms up.

"Quality is no accident!"

75-3215

Great vest to wear over heavier clothing. Zipper front. DOT striping. One inside chest pocket for a radio and two inside waist pockets. Velcro adjustable sides. Meets ANSI / ISEA 107-2010 Class 2 standard. **M-6X**

PROTECTIVE CLOTHING

HIGH VISIBILITY—VESTS: CLASS 3, ACCESSORIES

75-3325

Two-tone ANSI Class 3 vest with d-ring pass thru. Vest also features high visibility piping around the edges to give you an enhanced safety factor. Includes ID badge holder, four pen pockets, two waist pockets with Velcro closures and two radio mic tabs on the left and right chest. Meets ANSI / ISEA 107-2010 Class 3 standard. **M-5X**

75-3305 / 75-3306

Five-point high visibility yellow mesh vest. Features Velcro breakaway points that allow the vest to be pulled off at the sides, shoulders or front for protection in case the vest is caught in machinery. ID badge holder, four pen pockets with radio pocket, and a radio tab on the left chest. Two waist flap pockets and zipper closure. DOT (Department of Transportation) striping. Meets ANSI / ISEA 107-2010 Class 3 standard. **M-5X**

75-3305 Yellow. **M-5X**
75-3306 Orange. **M-5X**

75-3301 / 75-3302

High visibility yellow polyester mesh fabric, excellent for warm days. Zipper front, DOT reflective stripes, two radio pockets that also have an ID badge display. Also has pen pockets and generous waist pockets. Zipper on the sides allow for relief from binding while sitting down. Meets ANSI / ISEA 107-2010 Class 3 standard. **M-5X**

75-3301 Yellow. **M-5X**
75-3302 Orange. **M-5X**

75-3307 / 75-3308

High visibility yellow mesh fabric designed for tough duty and long lasting wear. All fabric edges are reinforced with heavy trim. Heavy duty snap front, eight pockets, Velcro. Grommets for attaching tools. Rear pocket for plans or large size documents. Includes ID badge pocket. Meets ANSI / ISEA 107-2010 Class 3 standard. **M-5X**

75-3307 Yellow. **M-5X**
75-3308 Orange. **M-5X**

75-2501

Lightweight yellow mesh pant with DOT striping. Drawstring waist with pass thru pockets and elastic at the ankles. Meets ANSI Class E requirements. When paired with an ANSI Class 2 garment, the whole ensemble becomes Class 3. **S(S-M), L(L-XL), 2X(2X-3X), 4X(4X and up)**

75-2391 / 75-2392

GAITERS. Increase day and night visibility while protecting pants and boots. **One size fits all.**

75-2391 Yellow. **One size fits all.**

75-2392 Orange. **One size fits all.**

75-8201 / 75-8202

Acrylic beanie designed to keep head and ears warm on a cold day. Includes reflective striping that is stitched in and cannot be washed out. **One size fits all.**

75-8201 Yellow. **One size fits all.**

75-8202 Orange. **One size fits all.**

Breaking down the different classes

In order to receive a rating of a class 2 or class 3 safety apparel, it must achieve preset requirements set by the American National Standards Institute, or ANSI. These requirements include the amount of necessary reflective material, the amount of background material, and whether or not the garment has sleeves.

Safety classifications were designed to help regulate the required apparel needed by state workers. ANSI clothing is necessary in areas of high speed traffic and when workers are near heavy machinery. If you are purchasing one for yourself personally, there is no law requiring you to wear a certain class. It is always a good idea, however, to consider purchasing one with a rating of class 2 or class 3, as it will provide more visibility than one with an economy rating.

Class 2—This reflective clothing is required for workers who are near heavy machinery or near traffic between the speeds of 25-50 mph. ANSI designates that all class 2 garments must have 201 square inches of retro-reflective material, with 1.375 inch reflective striping. They must also have 775 square inches of background material and are sleeveless.

Class 3—This reflective clothing gives the user higher visibility than that of class 2. They have sleeves, 310 square inches of reflective material with 2 inch striping, and 1240 square inches of background material. Those rated Class 3 are required for workers near traffic in excess of 50 mph.

Economy Class Vests—Some companies use this term economy to denote a vest as cheap or inexpensive, while some others use the term to describe one that does not meet the ANSI requirements of class 2 or 3. It is important to check the description for clarification.

75-3003 / 75-3004

Economical polyester mesh vest. 1" silver reflective striping. Velcro front closure. **One size fits most.** *(This item is designed for sight safety only. It meets no ANSI standards.)

75-3003 Yellow. **One size fits most.**

75-3004 Orange. **One size fits most.**

PROTECTIVE CLOTHING

VISIBILITY—SITE SAFETY

Site Safety Apparel

Site safety apparel does not meet the rigorous standards of ANSI for visibility. What site safety apparel is designed to do is to provide comfort and wear ability while still providing higher degrees of visibility than normal clothing. Areas where site safety apparel can be used: construction sights, recycling plants and areas where there is plant traffic, but not at higher speeds. Talk with your onsite safety professional to see if site safety apparel is right for your application.

Majestic has introduced a full line of site safety in different weights and make up of fabric. Please read on to find just the right garment for you.

Another way Majestic makes things easy for you, is personalization. All of these garments can be personalized with striping and logos. Read more about personalization in the later pages of this catalog or please contact your Majestic sales representative to find out more.

PROTECTIVE CLOTHING

HIGH VISIBILITY—SIOEN

Allied with one of the World's
Foremost Manufacturers

SIOEN

We are proud to offer you SIOEN® protective clothing, the very best available for technical performance, comfort and design. SIOEN®'S experience in coating and the manufacturing of protective wear dates back forty years, but their ongoing focus is the future of advanced protective wear. As one of the world's leaders in fabric and garment manufacturing technology, SIOEN® has developed many advancements in protective wear. Flexothane® is a revolutionary polyurethane coated knit fabric with unsurpassed elasticity and tear resistance—the ultimate in comfort and protection.

Flexothane® is:

- Waterproof
- Windproof
- Cold-resistant
- Noiseless
- Supple
- Breathable
- Lightweight
- Hygienic
- 150% Stretchable
- Extremely Tear-resistant
- Machine Washable

The results of SIOEN®'S commitment to research and development are here for you to experience with confidence: state-of-the-art clothing for industrial safety, high visibility, chemical protection and flame retardant protection. SIOEN® is widely used in the agricultural, marine safety and industrial fishing industries as well as for corporate identity clothing. Flexothane® is a registered trademark of SIOEN® Belgium.

MCKINLEY

7105B

McKinley™ Jacket with Liner

7105B Blue body with black shoulders. **XS-6X**

7105BK Black body with black shoulders.

XS-6X

About McKinley™ Jackets

A true all-season work parka. The jacket shell is PVC coated polyester that is 100% waterproof and extremely durable for the roughest work conditions. Include the removable polar fleece non-pilling liner and the jacket is warm enough for extreme cold work environments down to -20 °F. Remove the liner or open any of the several ventilation zippers to be comfortable in warmer weather or higher levels of exertion. The fleece liner is designed to be worn by itself if the shell is not necessary. Available as a system that includes the jacket and fleece, or separately.

McKinley
System Jackets

7101

McKinley™ Jacket Liner

Polar fleece non-pilling liner. (Sold separately.)

XS-6X

High-vis striping available by request

Add High Visibility!

All lined McKinley™ jackets can be ordered with high visibility striping. Although not ANSI compliant, the addition of reflective stripes makes the McKinley™ line even more versatile. Fire and rescue, police agencies and even parking lot attendants use McKinley™ high visibility jackets when work conditions demand the ultimate in warmth and the safety of reflective high visibility. The Star of Life, Maltese Cross and most any personalized artwork can be added to any lined McKinley™ jackets.

Majestic makes it easy to merchandise your products.

We can attach a retail hangtag to virtually any style of glove, boot or garment. In addition to the Majestic tag you see here, custom tags with complete tag development and printing services are available. A UPC code is included on every tag and special customer item numbers are no problem. Just ask. We can also help with “promo packaging” of work gloves to stimulate customer interest. Styles such as brown jerseys can be sold in three pair packs banded with a single hangtag. Typically placed in a dump bin, on an end cap display or in their own in-out promotional display, banded gloves present a tremendous opportunity to provide customer convenience and to drive sales.

The Majestic production department has mastered the art of branding and stamping a wide variety of work gloves. Personalized identification can be placed on a glove using heat-applied transfer tape, ink stamping or by actually branding a logo or slogan onto the back of a glove. Logos can also be heat-transfer applied to jackets. The Majestic graphics department can assist in developing the artwork for this personalized service.

Merchandising capabilities

Tagging: A header card added to the product, including item number, description, and UPC number.

Options: Our tag, your customized tag or an anonymous tag. From our description, item, UPC to all your information.

Printing on product: Branding a product with a corporate identity/customer logo, safety message, special occasion, etc. This can be accomplished in many different ways from one color to multi-color on gloves, clothing and boots. Please view the associated pictures descriptions on the following pages:

- Branding—Pg. 116

T07

T08

T15

Branding

Branding is a hot die stamp that burns and embosses an image into the surface of leather. It is a simple and economic option to personalize grain leather. There is a 10 dozen minimum for all first orders.

Ink Transfer

Ink stamping is a hot stamp used to transfer a one color image from ink tape. Like branding, this is a simple and economic option to personalize split leather and textiles. There is a 10 dozen minimum for all first orders.

Spot Color Heat Transfer

A spot color logo is applied with heat to the glove. This process is regarded as our highest quality and best looking personalization process for gloves. Unlike our full color logo, only the image is applied and no contour lines or border is needed. This option is only available when future orders within a year total 300 dozen or more gloves and is restricted to spot color.*

Full Color Heat Transfers

Like the spot color logo process, the full color heat transfers are applied to the glove or jacket with heat. Unlike spot color, as the name implies, the full color heat transfers are full color*, meaning there are no restrictions such as shading or color blends, making even a photograph possible. With a 10 dozen glove, or one garment minimum, this is a convenient option for smaller orders where a color logo or message is wanted. The only restriction is that the logo must have a border or contour line such as those shown above.

Also available is the option to have anyone of our garments personalized with an employee name.

Rubber Logo

Rubber logos provide a visually appealing dimension to customization. They have excellent detail and clarity with raised letters in bold colors. Minimum quantities are required and vary by style.

High Visibility Heat Transfer Decal

We are able to heat apply a fully custom 3M reflective logo to any of our garments. This is not only a great looking option, but enhances visibility in most situations. This particular 3M reflective material is regarded as the leader of retro reflective material and complies fully with the American National Standard for High-Visibility Safety Apparel and Headwear ANSI/ ISEA 107-2010 standard. There is a minimum order of one garment.

Screen Printing

Screen printing is the process of applying ink to a garment. Screen printing is restricted by the amount of colors in the logo, but is very economical option to personalizing logos, particularly in larger quantities.

Majestic Glove now has the ability to do in house screen printing. This dramatically decreases the timeframe to produce customized apparel.

Embroidered Patch

Our embroidered patches are heat applied, preserving the waterproof benefit of the garment, making this an ideal option for those who want the premium embroidery look while still maintaining the integrity of the jacket. With minimum orders of twenty garments this is an outstanding option. Please contact your Majestic distributor as the logo is very important to determine capability and costs.

Embroidery

Majestic can also embroider garments using the traditional embroidery process. Before deciding, please keep in mind, many of our garments have a waterproof barrier that can be damaged during the embroidery process. Please confirm with your distributor before making the final decision.

What we need from you:

All logos submitted must be: Vector image* in .EPS, .AI, or .PDF format. For personalized full color heat decals, a very high quality 300DPI file is required at the desired size or larger OR Majestic can re-create the logo for an additional charge.

Definitions:

Spot Color: Are pre-mixed inks. For example, to print a red, green and black apple, red, green and black spot color inks are used.

Full Color: With the full color or CMYK process, to print ANY color image, cyan, magenta, yellow and black inks are overlapped to achieve the full color spectrum.

***Vector Image:** A vector image is made up of points lines, curves, and shapes, made up or filled in with colors. A bitmap image is made up of an array of pixels often used in photographic images.

BlazeTEX

Comfortable FR Clothing, it's what people are asking for. With so much of the same old garments out there, BlazeTEX by Majestic offers some of the most comfortable and innovative garments available.

FireZerO®

FireZerO® is the industry leading brand of flame resistant fabrics and garments that employees wear for body burn protection in the event of a flash fire. The oil and gas, utility, electrical, contractor, and petrochemical industry sectors prefer FireZerO® to protect their employees, their most important asset.

Our fabrics and garments are manufactured to rigid specifications, such that our quality is unsurpassed. The fabric, a 90% cotton 10% nylon blend, is rugged, durable and handsome. Our twill finish combined with expert tailoring offers the customer a fine garment built to their exact requirements. Vivid, consistent colors enhance the garment's visibility and appearance.

All of our products undergo continuous testing at both the factory and at independent labs. Every fabric run is tested to meet industry standards.

Our garments are tailored and manufactured at dedicated factories under the supervision of experienced quality control professionals. We produce the full range of insulated and non-insulated garments for year-round weather conditions, including our "extreme" line up of products built for very harsh cold climates. Coveralls, bibs, pants, shirts, jeans, parkas, and jackets represent the majority of the products. Most of our customers use company identification and logos combined with individual employee identification. Many art sensitive patterns are transferred onto the garments by our experts.

FireZerO® garments represent the best value in FR protection in the industry and are designed to meet the needs of workers in utility, electrical, oil, gas and petrochemical industries.

FireZerO®

“QUALITY NEEDLE!”

Majestic Glove is passionate about our quality control and customer service. Our manufacturer produces certified fabrics from premium cotton fibers combined with high tensile strength nylon. The finished yarns are then woven into the base fabric according to very stringent weaving specifications. Following continuous testing processes, the base BlazeTEX/FireZero® fabric are dyed and FR treated. Rigorous testing of each section of the finished goods is conducted at an independent laboratory with verifiable test reports. Subsequently, Majestic builds BlazeTEX/FireZero® garments at a dedicated factory to meet the exact requirements of our customers. Try us and you will see, we mean quality, hence our motto “Quality Needle!”.

Ask your Majestic Representative for our full line BlazeTEX catalog.
